- Analysis on effect of behavior of non-pregnant sows on the swine productivity by detecting and classifying postures (lying, standing, and sitting), using Darkflow.
- Visualization of behavior and footsteps of cows by drawing trace and heatmap, using Darkflow and SORT algorithm.
- Classification of hydroponic crops' weight change patterns into 7 categories, using CNN-LSTM model.
- Implementation of recommender system, using item-based collaborative filtering.
- Construction of REST API considering clients' needs, using Django REST framework.

Committee on World Food Security (CFS) in Headquarters of Food and Agriculture Organization of the United Nations (FAO), Rome, Italy | Intern Sep. 2019 ~ Feb. 2020

Research and report on datasets that are relevant to the proposed CFS workstream on <Data Collection and Analysis Tools> including:

- identifying the barriers impeding quality data collection, analysis, and use in decision-making.
- identifying specific high priority gaps in data production and analysis not covered by ongoing initiatives.
- highlighting the benefits of using data and the opportunity costs of not using data for decisions.
- illustrating initiatives that have encouraged evidence-based decisions in agriculture and food security across the public, private, and academic sectors as well as approaches that have not worked.
- providing insights into how to ensure data collection and its utilization give voice to the people most affected by policies stemming from that data, including farmers and other food producers.

Agricultural Information System Laboratory, Seoul National University | Intern Jul. 2018 ~ Sep. 2018

Provided support for research including:

- contributing to crawling work for unstructured data (e.g. news articles about agricultural issues), using Python.
- Analyzing auctioning price data of carrot wholesale markets, using R.
- Studying research papers in the field of agriculture.
